- **RCV6 is a unique anti-riot equipment, fitted with a smart-tech concept.**

- The most important feature of the computer-supported equipment is the controlling ability of the whole system commands and settings via a touch-pad colored control panel operation.

- All system functions are controlled on a touch-pad colored (PT) screen. Simple and adjustable utility by way of green and red light indications.

- The PT panel provides Setting, Operation, Help and Maintenance menus which are selectable by any language. The operator uses the selected menus to command his operations.

- Lighted and detailed definition of all material content and pressure levels.

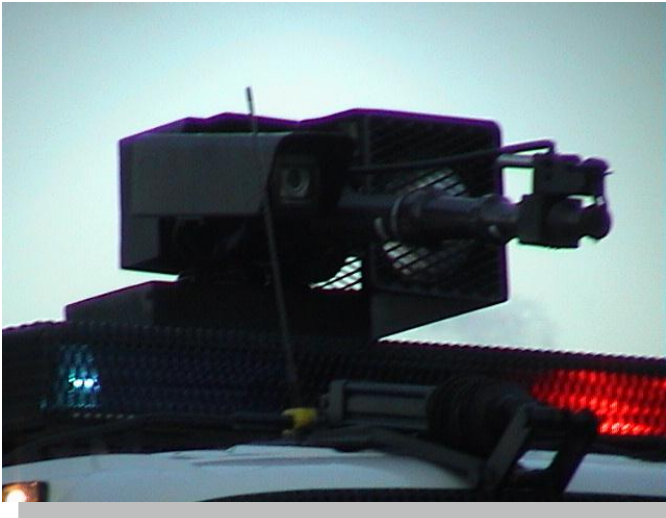

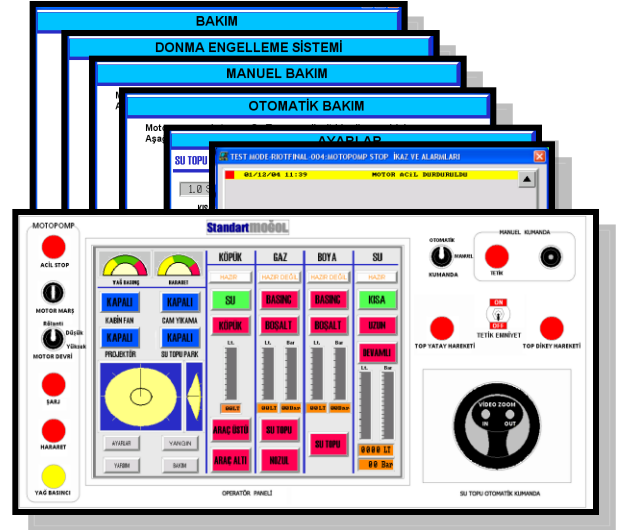

RIOT CONTROL VEHICLE

Standartmoğol

- A further feature of the smart-tech is the reporting function, through connection to a portable computer and printer.
- Printed report facility of all functions utilized on operation via computer connection socket.
- Reporting of all alarm and faults recorded.
- Simple use of and transfer between menus of operation, settings, maintenance.
- Help guide on PT panel.
- The operator can carry out all functions of the cannon, trigger and monitor zoom on a single-hand control system.

- Monitoring of vertical/horizontal movements of cannon, on the control panel.
- Single handed operation of vertical/horizontal movements of cannon and camera, trigger and zoom actions.
- LCD wide screens for monitoring top and rear camera views.
- 2 colored night and day vision cameras, 2 colored LCCD screens, video recording function, light beams, siren and loudspeaker. Online service and maintenance facility.
- Night vision function of camera.
